

Jason Karl works on the development of rangeland assessment and monitoring techniques and creating a multi-scale framework for measuring and monitoring ecological condition of rangeland habitats. Jason received his Ph.D. from Michigan State University and B.S. and M.S. degrees from the University of Idaho. He is currently an associate scientist with Sound Science, LLC and a Research Ecologist with the USDA Agricultural Research Service. Jason spent seven years as Spatial Ecologist for the Idaho Chapter of The Nature Conservancy where he developed and evaluated remote sensing and aerial inventory techniques for early detection and mapping of invasive species.
